

# Roland Boutique JX-03 | £239

Roland's JX-3P from 1983 was sonically powerful but had a bare-bones interface. Does the JX-03 improve things? **Dan 'JD73' Goldman** investigates...

**INCLUDES AUDIO**[vault.futuremusic.co.uk](http://vault.futuremusic.co.uk)**WHAT IS IT?**

Boutique version of the JX-3P dual-DCO synth

**CONTACT**Who: Roland UK

Web: [www.roland.co.uk](http://www.roland.co.uk)**HIGHLIGHTS**

- 1 It sounds lush, warm and precise
- 2 Very portable and feels sturdy
- 3 Surprisingly versatile, with all the hands-on control of the PG-200 programmer built in

The JX-3P often gets overlooked as it doesn't say Juno or Jupiter on the front but under the hood lies a very powerful, largely Juno-based DCO engine (with two DCOs instead of the single Juno DCO). Due to its basic front panel and lack of real-time control, the JX-3P was relatively unpopular and, at the time of its launch in 1983, Roland were clearly affected by the DX7's increasing popularity and influenced by its simple 'parameter access' system (press a function button and change the value with a single slider). Although you could program the JX-3P from its front panel (albeit slowly), you could also purchase the PG-200 programmer which sat atop the left-hand side of the board with

magnetic strips and featured 24 real-time switches/controls, turning the JX-3P into something altogether more exciting. The PG-200 is pretty much an essential buy if you grab a JX-3P today, but finding both together is hard – this is where the JX-03 comes in. I imagine the JX-3P will be the least popular of the Boutique models as it's the least 'famous' but, ironically, it's actually my favourite of the three Boutique models.

The limited edition JX-03 is once again built into the same Boutique case as the JP-08 and JU-06 and features a metal-faced, plastic box with 4 x AA battery power, USB/computer buss power with a 2-in/2 out USB audio/MIDI interface and a 0.5 Watt speaker. Again, it docks via a ribbon/multi-pin

lead with the £75 K-25m keyboard/housing to form a self-contained 2-octave keyboard that can easily be thrown into a bag or backpack for gigging – it's certainly sturdy enough to use on stage and has decent build quality too, with all the panel controls feeling solid. Unlike the other Boutique models, the panel here is comprised completely of dials and switches and no sliders but, while the dials are pretty close together, the great thing is the JX-03 incorporates all the functionality of the PG-200 programmer right onto the front panel, taking it leaps ahead of the JX-3P. I dare say if Roland had included all these real-time controls on the original JX-3P it would have been a lot more popular, perhaps even more so than the Juno range!

Architecture-wise there are a few important changes over the JX-3P. Apart from being a 4-voice modelled analogue engine (and using ACB like the other Boutiques, vs the original JX-3P's 6-voice analogue oscillators + digital envelope/modulation engine), DCO1 now has an extended range from 64' to 2' (originally 16' to 4') and adds sine and triangle waves, plus pink noise to the original's saw and two pulse wave options. DCO2 also has the same extended oscillator range and adds the same additional waveforms alongside white noise, which greatly extends the

sonic scope beyond the JX-3P. The hands-on controls are much the same as the PG-200, except for the additional waveforms found on the LFO dial – there are now two additional saw/ramp waveforms (normal, plus a mirror image) which again nicely extend the sonic scope of the JX-03 beyond the original JX-3P. Also included are solo/unison/portamento options and portamento.

### Big sounds

The JX-03 works on the same basis as the JX-3P in terms of sound selection, so you'll find the same 32 preset sounds onboard, spread over banks A and B, with bank C dedicated to 16 user-slots (unfortunately 16 fewer user-slots than on the original). Sounds are selected using the colour-coded

### Modulation And Control

There's plenty in the way of sound-shaping onboard and you can dial in subtle or complex modulations. DCO1 and 2 can have their frequencies modulated by the envelope's ADSR and/or by the LFO, while DCO2 has a cross modulation dial with two

depths of oscillator sync, two depths of Metal modulation and classic ring modulation. Envelope mod and LFO mod can be sent independently or simultaneously in varying amounts to both oscillators too, enabling you to dial in some very

detailed textures, though there's no dedicated PWM onboard.

In the filter section you can dial in simultaneous envelope and LFO mod and send it to the filter in varying amounts; the LFO has five waveforms plus noise as a mod source for more chaotic textures.

ABC bank buttons and the 16 patch buttons that also double as sequencer step buttons and secondary function buttons (like the other Boutiques). Preset names include E.Piano 1, D.

secondary functions) and the single button chorus which sounds very similar to the chorus on the Juno series – it really helps bring sounds to life and adds stereo width and animation to

static sounds; though, with the JX-03's ability to have two full-range DCOs detuned against each other, it's by no means as essential as it is on the Juno series,

though it's still great to have.

To sum up, this is my favourite of the Boutiques. It just has something about it that's inspiring and inviting – it's simple to use but sounds big, warm and friendly, and does great bass, strings and brass but more crazy 'out there' sounds too with the nicely flexible modulation options. If you're in the market for a Boutique, then be sure to check this underdog out as its charms are plentiful and it sounds fat with a capital F! FM

Guitar (Digital Guitar) F.Clav (Funk Clav), Planet and Jet, none of which really sound like their names but for 1983 they were pretty good! Today, they certainly have a simplistic charm about them and I really dig them! SBras2 is a particularly fine warm synth-brass patch, while Str2 is a lovely rich and thick string pad; in fact string and brass pads are where the JX-03 really stands out, although it can do some great growly basses and cutting leads/FX too.

The general tone is nicely defined, rich and warm, with a slightly more musical-sounding/more open top-end than the JU-06/JP-08. Like the Juno series, there's also a resonant low-pass and a separate high-pass filter but this time, the filter is a different design from the Juno-106 and you can really hear the difference in terms of more warmth, growl and sheen. The JX-3P (and thus the filter model in the JX-03) are based on the more sought-after Roland filter (the IR3109) found in the SH-101, Jupiter series and in the Juno-6 and 60.

Finally, let's also not forget about the basic built-in delay (hidden in the

### SPECS

**Maximum polyphony:** 4 voices

**DCO-1 section:** RANGE, WAVE FORM, FREQ MOD LFO, FREQ MOD ENV switch

**DCO-2 section:** RANGE, WAVE FORM, CROSS MOD, TUNE, FINE TUNE, FREQ MOD LFO, FREQ MOD ENV switch, LFO DEPTH, ENV DEPTH, Polarity switch

**VCF section:** SOURCE MIX knob, HPF CUTOFF knob, LPF CUTOFF knob,

RESONANCE knob, LFO MOD

knob, PITCH FOLLOW knob, ENV MOD knob, ENV MOD

polarity switch

**VCA section:** MODE switch, LEVEL knob

**LFO section:** WAVE FORM select knob, DELAY TIME

knob, RATE knob

**ENV section:** ATTACK,

DECAY, SUSTAIN, RELEASE

BANK A, B, C buttons

**Effects:** Chorus, Delay Step sequencer

16-step/16-pattern

**I/Os:** PHONES jack, Stereo

minijack, OUTPUT jack:

Stereo minijack, INPUT jack:

Stereo minijack, MIDI (IN,

OUT) full size DIN

connectors, USB port:

MicroB type (Power, Audio,

MDI)

**Dimensions:**

300 x 128 x 46mm

**Weight:**

950g

### ALTERNATIVES

Roland JX-3P

Approx £400 without PG-200 programmer, approx £600+ with programmer (used)

The original JX-3P can be had for a relatively modest outlay (but more with the PG-200).

eBay, Gumtree, etc....

Kiwi-3P (JX-3P upgrade)

\$265 plus shipping

If you own an original JX-3P, this chip replacement is essential and adds some killer extra functionality.

[www.kiwitechnics.com](http://www.kiwitechnics.com)

Roland MKS-30 (Planet S)

Approx £300-400 used

The nearest equivalent to a rackmount JX-3P but with 64 internal and 64 cartridge memories.

eBay, Gumtree, etc....

### FutureMusic VERDICT

The JX-03 is nicely tweakable (with all the PG-200's controls onboard) and it sounds great.
